

New York State Child Care for All

Executive Summary

New York is presented with an unprecedented opportunity to achieve universal child care. In January 2025—and many times since—Governor Hochul has committed to achieving universal child care statewide, and her own Child Care Availability Task Force (CCATF) released a Roadmap for Universal Child Care.¹ Among State legislators, there is strong support for investment in child care, and for achieving a universal system.

In New York City, Mayor-elect Mamdani has made universal child care a cornerstone of his affordability agenda, and a top priority of his first term. He and Governor Hochul have committed to working together to achieve this shared goal—in New York City, and around the state.

The Empire State Campaign for Child Care is a statewide coalition of parents, child care educators, and advocates who have been working together since 2017 to ensure that every family in New York State has access to free, high quality child care, and that every child care educator earns a thriving wage.

Our campaign's plan for statewide universal child care is guided by the CCATF's Roadmap for Universal Child Care, but goes further than its high-level set of goals—setting forth a concrete rollout plan guided by the following principles:

- Raise child care worker wages immediately to stabilize the existing system and build capacity by recruiting and retaining early childhood educators.
- Prioritize low-income families during the rollout to universal child care, either receiving care under New York State's Child Care Assistance Program - the principal means of public funding to help children from low- and moderate-income families access child care – or through a universal child care bridge project. To do this, New York must continue to expand investment in the Child Care Assistance Program while the state is shifting toward universal child care.
- Protect middle-income families from rate hikes, benefits cliffs, and shifting supply as we scale up to universal child care.
- Recognize that families of varying income levels struggle to afford or access child care and deserve relief.

- Includes afterschool care, summer care and evening and weekend care, recognizing that families' need for child care doesn't exist only Monday through Friday, 9 to 5, nor does it end when a child enters pre-K or Kindergarten.
- Maximize federal funding while building to universal child care.
- Accommodate the diversity of the multiple existing systems of care and early childhood education throughout the state.
- Support all types of care to ensure families have the freedom to choose the care setting that best meets their needs and to ensure we preserve capacity in all settings – home, center and school-based during the rollout. It will take all existing capacity, plus additional new capacity to meet the growth in demand that will come with a commitment to universal care.

The Empire State Campaign for Child Care's Plan for statewide universal child care features four main components:

1) Increase child care supply and quality throughout New York State by providing the child care workforce a sustained hike in compensation

New York State's ability to deliver universal child care depends on the supply of care throughout the state. Transitioning from a limited, broken market to a system of universal coverage with options that meet families' needs will take time, sound planning, and considerable public investment. While the child care system capacity has grown over the past several years, the sector still experiences considerable workforce shortages and inadequate pay.

The most immediate way to increase child care supply and quality throughout New York is to adopt legislation proposed by Senator Jabari Brisport and Assemblymember Andrew Hevesi (S.5533/A.492-A) that would implement the workforce compensation increases outlined in the CCATF Roadmap to Universal Child Care. ²

2) Further strengthen New York's Child Care Assistance Program starting by clearing the waitlists

New York State's Child Care Assistance Program (CCAP) is the principal means of public funding to help children from low- and moderate-income families access child care while their parents work or pursue an education. The growth in CCAP over the past several years demonstrates the value of these reforms and the support this program provides to families across New York. Notably, as of October 2025, 27 counties have closed enrollment or started waitlists due to inadequate funding to meet need. These shortfalls have disrupted the lives of tens of thousands of working families across the state.

Necessary reforms include fully funding the program to serve all families who apply and are eligible for assistance, shifting management of this program to New York State, fully eliminating parent co-payments, and streamlining the process to receive assistance. All of these reforms would help stabilize CCAP to meet the needs of low-income working families while at the same time building a strong infrastructure for universal child care.

3) Adopt Community Eligibility Standards for Child Care Assistance

Federal law limits CCAP eligibility to families who meet certain programmatic, immigration, and income requirements. A complex application process designed to comply with federal requirements subjects families to significant means-testing, paperwork requirements, and other barriers. To transition to universal child care, policymakers should borrow from the successful approach employed by New York State in transitioning from a free and reduced price school meals program to a system of universal free school meals.

New York State should adopt a CCAP community eligibility provision for children residing in communities where a high share of children under 13 reside in households that are income eligible for the Child Care Assistance Program. These families would not be subject to the same paperwork requirements and would not have to prove eligibility for the program at an individual household level. Instead, they would need to indicate through a simple application process that they seek child care and provide proof of address to demonstrate that they reside within a community eligible district. Families residing in community eligibility districts would not be required to contribute co-payments.

4) Cap out-of-pocket costs for families outside community eligibility areas and not enrolled in the Child Care Assistance Program

Policymakers should also offer substantial support to families in other parts of the state who also struggle to afford the high cost of child care but are not initially covered under the community eligibility program and do not receive support from CCAP. To support these families, as well as other households who are hesitant to engage in what many consider to be an intrusive and burdensome CCAP application process (including immigrant families), the state should introduce a program that would cap per-child, out-of-pocket costs at \$100 a week (or \$20 a day). Under this program, New York State would cover the remainder of the cost of care at participating providers, up to the reimbursement rate set by the Office of Children and Family Services.

Implementation Plan

The 2026-27 New York State Budget should take substantial steps towards making universal child care a reality across New York State.

Specifically, the enacted state budget should include the following provisions:

- Enact the \$1.2 billion workforce compensation program detailed in Governor Hochul’s Child Care Availability Task Force’s Roadmap to Universal Child Care.
- Include sufficient funding for the Child Care Assistance Program to clear the waitlists and ensure eligible families throughout the state can receive assistance.
- Invest \$75 million to partner with several local social service districts to develop and implement the community eligibility for child care assistance.
- Invest \$75 million to cap child care costs at \$100 a week per child in three or four communities in New York State.

The community eligibility roll-out and the capped-fee project must start relatively small to allow the Office of Children and Family Services to work out the operational details of this approach. However, once they do so, those efforts should expand as quickly as possible to ensure that all New Yorkers seeking child care can benefit from those programs.

We envision this rollout taking 6 years and ultimately achieving a system whereby every family in New York can access free child care up through 12 years old, much like how every free school meal was eventually covered through expansions in the school meals community eligibility process.

New York would maximize federal funding during the implementation phase by concentrating all federal CCAP funding and required state matching funds on counties and communities still offering traditional CCAP. After full implementation of New York State Child Care for All, federal funding will be maximized by using administrative data and an aligned application process between SNAP and the Child Care Assistance Program. This would allow New York to access federal funds for child care without unduly burdening families receiving care.

About the Empire State Campaign for Child Care

The Empire State Campaign for Child Care is a statewide coalition of parents, child care educators, and advocates who believe that every family in New York State deserves high quality, universal child care and that every child care educator deserves to earn a thriving wage.

The campaign was founded in 2017, and advocates at the state and federal levels for investment in child care that best serves the needs of all of New York’s families and child care educators.

The Empire State Campaign for Child Care’s Vision of Universal Child Care

Universal child care is free child care for all. It means that every family, regardless of income, immigration status, or zip code – inclusive of families of children with disabilities - can access high-quality, free child care for all children under age 13, in the setting of their choice—school, center, or home-based care. Universal child care is free from intrusive

applications, work reporting or immigration status requirements, or long processing times. It means that every child care educator earns a thriving wage that reflects the true cost of care. Universal child care means that child care is treated as a public good, rather than a private family burden.

Acknowledgments

A special thanks to Pete Nabozny, Policy Director for The Children’s Agenda and co-chair of the Empire State Campaign for Child Care Legislative Workgroup, for being the lead author on this plan, and to the many members of the Campaign who provided input, data and feedback on this report, including the Center for NYC Affairs, and the members of the ESCCC Steering Committee – Adirondack Birth to Three Alliance, Alliance for Quality Education (AQE), Citizen Action of New York, Committee for Hispanic Children and Families, Day Care Council of New York (DCCNY), ECE on the Move, Marks of Excellence, MomsRising, New York Association for the Education of Young Children (NYAEYC), New York State Network for Youth Success (NYSNYS), PowHer New York, Prevent Child Abuse New York (PCANY), Schuyler Center for Analysis and Advocacy, The Children’s Agenda (TCA), The Innovative Daycare Corp, Western New York Child Care Action Team (WNYCCAT) and WHEDco.

Thank you to the many funders and supporters of the Empire State Campaign for Child Care, including Child Care NEXT, New York Community Trust, Robin Hood, Child Care for Every Family Network, and Raising Child Care Fund. And finally, none of this would be possible without the tireless efforts of the thousands of child care educators, parents, grandparents who advocate every day – making phone calls, sending emails, meeting with lawmakers, attending advocacy days and budget hearings, press conferences and rallies - to secure access to high quality child care for all New York families, and a thriving wage for the child care workforce.

Introduction

New York leaders, including Governor Hochul, have made ambitious pledges to achieve universal child care in New York. Earlier this year, the Governor’s Child Care Availability Task Force released a “Roadmap to Universal Child Care.”¹ This roadmap set forth a series of high-level short-, medium- and longer-term steps to reach that goal. However, it did not articulate a concrete rollout plan that allows the state to continue to draw down all available federal funds – available only to fund a program that continues to require means testing, activities, and immigration testing - while at the same time building a truly universal system - free from means and other testing.

The plan outlined in this report does both things. It preserves and strengthens the existing Child Care Assistance Program upon which more than a hundred thousand of New York’s low-income working families rely while we are building toward universal child care - to ensure those families who need assistance most continue to receive it, and to ensure New York continues to draw down all federal funds. At the same time, this plan proposes two state-funded programs to serve as a bridge between our current child care system and a truly universal system of child care in New York State. It also recognizes that no transformation of child care in New York State can occur without investing in the child care workforce and ensuring that early childhood educators are appropriately compensated for the critical work they do. Finally, this plan for universal child care recognizes and affirms the diversity of New York’s existing child care system and envisions a system that cares for children up to 13 years old.

Under this plan, it is envisioned that these bridge programs will expand over several years, and means-tested assistance will recede, until all families across New York State have access to free, high-quality child care.

Background and Context

New York State leaders have made substantial reforms to the state’s child care system over the past four years. More than 160,000 children in New York benefit from the state’s Child Care Assistance Program each month, an increase of more than 100,000 children since 2021.²

¹ See the Child Care Availability Task Force’s reports and public meetings, available at <https://ocfs.ny.gov/programs/childcare/availability/>

² See OCFS monthly Child Care Assistance Program enrollment data, available at <https://ocfs.ny.gov/programs/childcare/data/>

The number of child care providers across the state, which declined significantly during the prior decade, has begun to recover over the past several years,³ giving families more choices in selecting a provider who fits their needs.

However, despite significant investments in the state’s Child Care Assistance Program and eligibility expansions, it falls far short of covering all eligible families seeking assistance. Further, families earning more than 85% of State Median Income (SMI) are ineligible for enrollment in the program, along with families who cannot meet the immigration status, work reporting, minimum earnings, and other requirements of the program. All of these families must pay the full cost of child care⁴. Given how high these costs are, many

³ See OCFS Child Care Provider Trends, 2015-2024, available at <https://ocfs.ny.gov/programs/childcare/data/>

⁴ See Child Care Aware of America’s [2024 analysis](#) of child care supply and prices in New York and other states. .

parents, especially mothers, opt to leave the workforce altogether. Others piece together informal care arrangements week-to-week and struggle to juggle work and parenting responsibilities.

In addition, the costs of administering the Child Care Assistance Program have grown substantially, and local governments struggle to manage the volume of applications. For example, in New York City the number of Child Care Assistance Program applications received by the City's Administration for Children's Services increased from 44,118 in 2022 to 94,803 in 2024. In Monroe County, the number of applications have increased from 4,091 in 2023 to a projected total of at least 6,000 this year. The number of applications taking more than 30 days to process has grown considerably as caseloads have risen.⁵

Policy efforts to achieve universal child care in New York have, in recent years, focused on increasing eligibility and funding for the Child Care Assistance Program. Total spending on the Child Care Assistance Program has increased by more than \$1 billion over the past several years and eligibility for assistance has been extended to the maximum federal level of 85% of SMI. This has driven the dramatic enrollment increase mentioned above.

To cover families making over 85% of State Median Income, along with families excluded because they cannot meet work reporting requirements or immigration status tests, New York would need to rely exclusively on state resources. As the state expands its investment in child care with the goal of achieving universal care, it will be difficult, at least in the short term, to offer all families in the state the same nearly free child care provided to low-income families through the Child Care Assistance Program.

However, adding families above 85% of the State Median Income to the Child Care Assistance Program and requiring a sliding scale fee based on household income would be difficult to scale up effectively, even if New York State managed to identify sufficient funds to do so. Expanding the program by imposing a sliding scale fee that varies based on income would also mean that all families throughout New York would continue to have to submit to costly and onerous, often intrusive means testing at a time when many families fear interacting with government systems.

With those considerations in mind, The Empire State Campaign for Child Care recommends that policymakers adopt the following framework to move towards universal child care in New York State.

⁵ This information was obtained by The Children's Agenda through Freedom of Information Law requests to New York City and Monroe County.

Proposed Approach to Achieving Universal Child Care

Our campaign's plan for statewide universal child care is guided by the Child Care Availability Task Force's Roadmap for Universal Child Care, but goes further than its high-level set of goals - setting forth a concrete rollout plan guided by the following principles and considerations:

- Raise child care worker wages immediately to stabilize the existing system and build capacity by recruiting and retaining early childhood educators.
- Prioritize low-income families are prioritized during the rollout to universal child care, either receiving care under New York State's Child Care Assistance Program - the principal means of public funding to help children from low- and moderate-income families access child care – or through a universal child care bridge project. To do this, New York must continue to expand investment in the Child Care Assistance Program while the state is shifting toward universal child care.
- Protect middle-income families from sharp rate hikes and shifting supply as we scale up to universal child care.
- Recognize that families of varying income levels struggle to afford or access child care and deserve relief.
- Includes afterschool care, summer care and evening and weekend care, recognizing that families' need for child care doesn't exist only Monday through Friday, 9 to 5, nor does it end when a child enters pre-K or Kindergarten.
- Maximize federal funding while building to universal child care.
- Accommodate the diversity of the multiple existing systems of care and early childhood education throughout the state.
- Support all types of care to ensure families have the freedom to choose the care setting that best meets their needs and to ensure we preserve capacity in all settings – home, center and school-based during the rollout. It will take all existing capacity, plus additional new capacity to meet the growth in demand that will come with a commitment to universal care.

1) Invest in the child care workforce to increase child care supply and quality throughout New York

New York State's ability to deliver universal child care depends on the supply of care throughout the state. Transitioning from a limited, broken market to a system of universal coverage with options that meet families' needs will take time, sound planning, and considerable public investment. Universal coverage cannot be achieved without sufficient supply of ready and committed early educators.

According to the Office of Children and Family Services (OCFS), there were 812,000 licensed child care slots across New York State in 2024, up slightly from prior years. Assuming those programs are fully staffed and enrolled, they have capacity to serve 28% of children under 13 in New York State. The true figure is likely much smaller. A survey of 1,253 providers across New York conducted by the Empire State Campaign for Child Care in early 2025 suggests that the functional capacity of child care programs across the state is much lower, because more than half (57%) of survey respondents reported being understaffed.⁶ Respondents also reported having closed classrooms and being forced to operate wait lists due to insufficient staffing.

Estimating the level of supply needed under a universal child care system is challenging. Uptake in other countries with more universal systems varies, especially by age. Involvement with other tuition free systems, such as Head Start, Pre-K, and afterschool programs not subject to licensure by OCFS, also affects uptake. Nevertheless, it seems fair to assume that a statewide effort to make child care affordable for more than two million children across the state will increase demand for care far beyond what the system has capacity to provide.

No expansion is possible without enough child care educators to staff programs and increase the supply of quality child care across New York State. It is critical that policymakers adopt measures to both reduce turnover in the existing workforce and attract new workers to the sector to meaningfully increase access to care. Insufficient retention and recruitment are primarily driven by low wages. Research from the Minnesota Federal Reserve shows that the availability of quality child care is directly connected to workforce wage levels.⁷

Governor Hochul's Child Care Availability Task Force's Roadmap to Universal Child Care laid out clear steps New York State should take to strengthen the child care sector and increase the supply of quality care throughout the state.

The most critical recommendation in that roadmap is the proposal to create an ongoing child care workforce compensation fund that provides wage supplements to all members of the child care workforce employed by programs participating in the Child Care Assistance Program. Ensuring this workforce compensation program is universally available is key to maintaining the stability of the child care system as universal care scales up throughout the state. This fund must continue New York until achieves universal coverage and the state child care assistance rate reflects the true cost of care, including paying a thriving wage reflective of the workforce's skills, education, years of experience, cultural competence, and other factors, and supporting the provision of health insurance,

⁶ See "[Workforce Shortages and Low Wages Are Deepening New York's Child Care Challenges](#)"

⁷ See the Federal Reserve Bank of Minneapolis – [Examining teacher turnover in early care and education](#)

retirement, and other employee benefits.⁸ Senator Jabari Brisport and Assemblymember Andrew Hevesi have developed legislation (S.5533/A.492-A) that would enact the plan outlined in the Governor’s roadmap.⁹ Passing this into law should be a top priority of the legislature in 2026.

New York State should also invest in child care start-up and expansion programs, both for facilities expansion and construction and workforce recruitment, training, and certification programs as it scales up to universal child care throughout the state. These investments should build upon New York’s existing diversity of care options for families, ensuring that home-based child care providers¹⁰ and community-based organizations have access to capital to renovate their facilities and expand their offerings.¹¹ A failure to support expansions at community-based organizations and family child care programs could leave the expanded child care system more dependent on private-equity-backed and other investor owned child care chains.

This proposed expansion would also be accompanied by increased investments in the Office of Children and Family Services, Child Care Resource Centers and child care provider quality improvement efforts like QUALITYstarsNY. New York will need to commit substantial resources to ensure that providers operating in the newly expanded child care system providers have the support, training, and coaching to provide every child with a nurturing and enriching care experience.

2) Adopt Community Eligibility Standards for Child Care Assistance

Given federal rules, the Child Care Assistance Program limits eligibility to families who meet certain programmatic, immigration, and income requirements. To transition to universal child care, state policymakers should borrow from the approach employed by anti-hunger advocates in transitioning from a free and reduced price school meals program to a system of universal free school meals.

In 1946, President Harry Truman signed the National School Lunch Act, a federally funded program that built on Great Depression and World War II era efforts to ensure school children were fed. This program did not provide universal school meals, but instead

¹⁰¹⁰ A forthcoming report by Lauren Melodia at the Center for New York City Affairs, titled *Dignified Pay for Quality Care: What New York’s Family Child Care Providers Need to Thrive* will be accessible at <https://www.centrernyc.org/> This report provides detailed analysis and concrete recommendations on how to strengthen and support home-based child care in New York.

¹¹ A recent [report](#) by All Our Kin, ECE on the Move, and Sharrock Strategy Group outlined how New York can better support home-based child care providers in both a start-up and ongoing capacity. Adopting that report’s recommendations can help scale up care throughout New York State.

established a framework for ensuring that children from low-income households could receive nutritious meals while children from families with greater means would pay for meals.¹² Under this structure and subsequent updates to the law, low-income families would have to individually apply to receive free or reduced school meals.

Over 60 years later, President Barack Obama signed the Healthy, Hunger-Free Kids Act into law. Among other things, it created a community eligibility framework for high-needs school districts to provide free school meals to all students, not just families who demonstrated their individual eligibility.¹³ The community eligibility provision reduced administrative costs to school districts, increased participation in the school meals program, and allowed all children in these schools to receive healthy meals each day. It also created a framework to achieve universal school meals for every student in New York State.

Over the past several years, Governor Hochul and the New York State Legislature have partnered to use state funds to extend this community eligibility framework to all schools in New York State. The 2025-26 school year marks the first time in New York State history whereby all schools that participate in the federal school meals program can offer free breakfast and lunch to their students.

This example provides a guide for how New York State can roll out universal child care across the state.

To begin, New York State should adopt a Child Care Assistance Program community eligibility provision for children residing in school districts where more than 80% of children under 13 reside in households making less than 330% of the federal poverty threshold (roughly equivalent to 85% of State Median Income¹⁴). All families who apply for assistance in those communities would be categorically eligible for child care assistance with the same terms as the Child Care Assistance Program¹⁵.

These families would not be subject to the same paperwork requirements as CCAP applicants. Specifically, they would not have to prove eligibility for the program at an

¹² See a Congressional Research Service [report](#) on the history of school meals.

¹³ See more information about the school meals community eligibility provision at the Food Research and Action Center's [website](#)

¹⁴ The American Community Survey table B17024 provides counts of individuals by age group and household income levels relative to the federal poverty threshold. It is likely possible to calculate the exact percentage of families below 85% of State Median Income using census bureau microdata, but that analysis is not available at this time. The Children's Agenda developed eligibility estimates for school districts outside New York City. Community District eligibility estimates within New York City were calculated by Ludovica Tursini at the Center for New York City Affairs.

¹⁵ Categorical eligibility is an approach that exempts a household from certain application tests if they meet some other programmatic condition. For example, families enrolled in the Supplemental Nutrition Assistance Program are [categorically eligible](#) for Head Start and do not need to prove eligibility for Head Start if they demonstrate proof of receipt of SNAP benefits.

individual household level. Instead, they would need to indicate that they need child care through a simple application process and provide proof of address to demonstrate that they reside within a community eligible district. Families residing in community eligibility districts would not be required to contribute co-payments.

Unfortunately, federal funds cannot be used for this purpose. New York State would need to fund this initiative with state dollars. Fortunately, the state's current spending on the Child Care Assistance Program exceeds what is needed under federal Child Care and Development Fund requirements. New York State is required to spend \$221 million in state and local funds on the Child Care Assistance Program each year, far less than the \$1.1 billion projected for 2026.¹⁶ New York State has discretion over how to use state funds. It currently chooses to require that all families meet the federally determined guidelines for eligibility, but it could choose to apply different, less onerous requirements for families living in communities where the vast majority of families are income eligible for the program.

Under the 80% threshold outlined above, 225,000 children under 13 years old residing in 56 school districts outside New York City would be deemed eligible for the program based on the school district they reside in. They represent 14% of all children residing outside New York City in the state. These 56 school districts include high-needs urban areas like Buffalo, Rochester, and Syracuse, along with many rural parts of the state.

Within New York City, 282,000 children residing in 12 of 59 community districts would qualify for community eligibility under this 80% threshold. This includes a significant portion of the Bronx as well as several neighborhoods in Brooklyn and one in Queens.

Over time, community eligibility levels would be lowered to include an increasingly large share of children in New York State. Lowering community eligibility levels to 70% would make 380,000 children outside New York City eligible for the program, inclusive of 23% all children under 13 years old outside New York City. Lowering the threshold to 70% within New York City would add 10 additional community districts to the program, and qualify nearly 478,000 New York City children for universal child care. At this 70% community eligibility threshold, nearly 40% of children in New York City would be categorically eligible for free child care.¹⁷

Districts that choose to offer contracted care programs, like New York City, would be able to use state community-eligible child care funds to serve families in a contracted care system in eligible districts, but families would also have the choice to select a provider of

¹⁶ See the federal Administration for Children and Families' FFY 2025 federal child care [allocations](#).

¹⁷ See this report's appendix for a listing of school districts (outside New York City) and community districts (within New York City) and the percentage of children residing in those communities who live in income eligible households today.

their choosing. The funds could be combined with state and local Pre-K dollars to offer wrap-around care and care during school breaks.

Contracted care can be an important tool to build capacity and ensure quality in community-eligible districts. However, given the struggles experienced by the contracted care system in New York City in recent years (e.g.: under-enrollment, delayed payments, contract rates that fall below the OCFS-established market rate, placements that do not match family preferences, etc.), it is critical to respect the care preferences of providers and families who choose care outside the contracted care system.

Similarly, families seeking after school care or care during school breaks would be able to enroll their children in various contracted programs, including New York State's Learning and Enrichment After-School Program Supports (LEAPS) or enroll in other community-based programs that best match their families' needs.

3) Cap Out-of-Pocket Costs for Families Outside Community Eligibility Areas and Not Enrolled in the Child Care Assistance Program

While introducing and expanding community eligibility for Child Care Assistance in high-needs parts of the state, state leaders should offer substantial support to families in other parts of the state who will also struggle to afford the high cost of child care as universal child care makes its way to their communities.

Families with young children and earnings near the 85% of State Median Income cut-off face an impossible trade-off when presented with an opportunity to increase hours or take a promotion. A slight pay increase for a family near the 85% State Median Income threshold can inadvertently trigger a staggering increase in out-of-pocket child care costs. For example, a family of three in suburban Westchester County enrolled in the Child Care Assistance Program whose income rose from \$95,000 to \$96,000 in 2025 faces an astonishing \$22,405 increase in child care costs. Under New York's current Child Care Assistance Program framework, an increase in work hours or a modest raise could inadvertently immiserate a family that believed it was benefiting from a raise or increased hours. The chart below demonstrates the out-of-pocket costs for a family of three with a single child within the Child Care Assistance Program, and when their income has exceeded the maximum threshold.

To support these families, as well as other households who are hesitant to engage with what they perceive as an intrusive Child Care Assistance Program (including immigrant families), the state should introduce a program that would cap per-child, out-of-pocket costs at \$100 a week (or \$20 a day). Under this program, New York State would cover the remainder of the cost of care at participating providers, up to the reimbursement rate set by the Office of Children and Family Services.

This initiative would be rolled out over the course of several years at a community and provider level. For example, each year, New York State could make an additional \$250-\$500 million available for eligible providers operating in certain communities. Communities that are not eligible for the community eligibility provision outlined above and have a high share of families near eligible for the Child Care Assistance Program (families making between

300% and 500% of the federal poverty threshold) would be prioritized first for inclusion in this program.

Child care providers within a designated community would be eligible, though not required, to participate in this program if they met certain criteria established by the Office of Children and Family Services. Among those criteria would be a requirement that the provider accept families enrolled in the Child Care Assistance Program and participate in the state's workforce compensation program, which establishes certain salary expectations. All modalities would be eligible to participate in this program, and technical assistance would be offered to ensure family child care providers can offer this low-cost care to families in their community.

4) Further Strengthen the Child Care Assistance Program

New York State's Child Care Assistance Program is currently the principal means of public funding to help children from low- and moderate-income families access child care while their parents work or pursue an education. New York's program is funded through a mix of federal, state, and local resources, and eligibility for the program is largely set by New York State, operating under federal guidelines. Reforms to the program enacted over the past several years have strengthened it considerably. Those reforms include:

- Expanding eligibility from 200% of the Federal Poverty Level (\$55,500 for a family of 4) to 85% of State Median Income (\$113,568 for a family of 4).
- Reducing the family share of child care costs from 35% of income over the federal poverty level to just 1% of income over the Federal Poverty Level.
- Raising reimbursement rates to the 80th percentile of the market rate survey.
- Reimbursing providers for 80 child absences, ensuring that providers are compensated regardless of attendance on a particular day.

The growth in New York State's Child Care Assistance Program over the past several years demonstrates the value of these reforms and the support this program provides to families across New York. Despite a burdensome application process, the program has grown to serve more than 160,000 children across the state each month. The Child Care Assistance Program is designed to offer choice and flexibility for parents as they try to simultaneously work and raise young children. This program allows parents to identify the caretaker who makes the most sense for their family. That could be a trusted neighbor or relative, a nearby Pre-K program offering wrap-around care, or a culturally responsive family child care provider near a family's home or a parent's workplace.

New York State's general fund investment in child care assistance is more than six times greater in the 2026 state fiscal year than the 2020 state fiscal year.

This funding commitment, while substantial and life-changing for tens of thousands of families across New York State, is still not enough to support the need for assistance throughout the state. In October 2025, 26 counties across the state had either closed enrollment to the Child Care Assistance Program or established a wait list to limit access to that program.¹⁸ If current enrollment and spending trends continue, most counties across the state will close enrollment within the next six months.

In transitioning to universal child care, New York State should make several key structural changes to the Child Care Assistance Program that will ensure eligible families can receive free or low-cost care.

Shift Management of the Child Care Assistance Program to New York State

New York is somewhat unique among states in how it manages the state's Child Care Assistance Program. According to research done by the Center for Law and Social Policy and the National Women's Law Center, only 8 states have a system where local governments manage the program enrollment and spending, facilitated by block grants made by the state to local governments. Nearly all other states determine eligibility and other programmatic components at the state level.¹⁹

As noted above, over the past several years, New York State implemented policy changes to standardize child care policies across several important domains and bring the state's program more in line with the structure in other states.

¹⁸ See The Children's Agenda's Child Care Enrollment Program Status Tracker -

<https://thechildrensagenda.org/2025/09/26/nys-child-care-assistance-program-enrollment-monitor/>

¹⁹ Shared with The Children's Agenda via email on July 23rd, 2024. Those states are New York, Colorado, Wisconsin, Virginia, Ohio, North Dakota, North Carolina, and Minnesota

Prior to the implementation of these changes, counties had authority to:²⁰:

- Set income eligibility levels
- Determine parent co-payment levels within very broad parameters set by the state
- Decide whether to reimburse providers for days when a child is absent from care, and determine how many absences were reimbursable

Today, all of those policies are set by New York State, not local governments. While these changes strengthened and standardized the program across the state, they also left local social service districts with fewer tools to manage the program within their community. Local governments are still ultimately responsible for all spending on the program within their community and managing the program within the county's budget, even if the state and federal governments provide most of the funding for the program, set eligibility criteria, and determine payment rates. Counties have the responsibility to manage child care assistance resources, but do not have much flexibility to do so.

This tension between state and local governments over child care spending revealed itself during the 2025-26 state budget negotiations. The Administration for Children's Services, which administers the Child Care Assistance Program within New York City, raised the alarm in early 2025 about the funding shortfall it was facing in the upcoming year. Several smaller upstate counties also closed enrollment or established wait lists for the program that spring. Disagreements about the timing of the announcement and extent of that shortfall complicated state budget negotiations, but ultimately, lawmakers recognized the importance of shoring up the Child Care Assistance Program in New York City (and to a lesser extent, other parts of New York State) in the finalized state budget. The final budget agreement included a \$275 million increase in New York City's required contribution to the Child Care Assistance Program, along with a \$400 million increase in state funding for the Child Care Assistance Program (with \$350 million earmarked for New York City). The state's increase in funding was presented as a one-time expenditure and has not helped counties clear wait lists and re-open enrollment.

Most of New York's children live in communities where access to the Child Care Assistance Program is currently closed or subject to a wait list. Thousands of low-income parents seeking care so they can obtain or maintain a job are not able to receive assistance now due to inadequate federal, state, and local funding.

²⁰ See Empire Justice Center's 2019 [report](#) titled "Shouldering the Strain: How Counties Cope with Inadequate Child Care Funding" for more information on how counties used to manage limited child care funds.

Child Care Assistance Program Enrollment Status

October 1, 2025

In transitioning to a child care system that covers every family in New York, policymakers should change state law to make the Child Care Assistance Program more directly managed at the state level. This would shift the program away from the inefficient block grant model currently employed by the state. Local governments would remain responsible for eligibility determinations and other administrative functions, but New York State would have more authority to manage the program, similar to how it oversees Medicaid or the Supplemental Nutrition Assistance Program.

A plan for universal child care must contain a commitment to fully fund the Child Care Assistance Program. A concrete way to do so is to follow Vermont's recent example and make New York's Child Care Assistance Program an entitlement for eligible families.²¹ Right now, only a relatively small number of families (mostly families receiving public assistance benefits or transitioning off the public assistance program) are guaranteed child care assistance for a period of time. To guard against concerns about exceeding the program's budget, the state could phase this child care guarantee in gradually, starting with families making less than 250% of the federal poverty threshold before eventually extending it to all income-eligible families over the next several years.

Eliminate Family Co-Payments Within the Child Care Assistance Program

Co-payments, or parent fees, are an administratively burdensome component of New York's Child Care Assistance Program. The state has lowered co-payments over the past several years to the point that most families contribute an insignificant amount to the cost

²¹ See [page 184](#) of Vermont's enacted 2024-25 state budget

of care. For example, a family of 4 making \$40,000 a year pays \$1.51 a week toward the cost of care. A family of 4 making \$70,000 a year pays \$7.28 a week. However, New York does require that families make their payments weekly, and providers are required to meticulously track and follow-up with families for these payments. The administrative burdens on families and providers are not worth the small amount of revenue these co-payments generate.

Under existing federal regulations, states are not permitted to fully eliminate co-payments for all families, though they can waive them for families below 150% of the federal poverty threshold, families experiencing homelessness, and several other categories.²² However, New Mexico has effectively eliminated co-payments by waiving them for as many families as possible and uses state funds to cover the co-payments for those families it cannot waive.²³ New York should follow New Mexico's lead in doing so.

Streamline the Child Care Assistance Application and Recertification Process

While the Child Care Assistance Program is an invaluable support to more than 100,000 families across New York each month, it can be a challenging program for many families to access.

In Suffolk County in 2023, for example, more applications for child care assistance were rejected (1,710) than resulted in enrollment in the program (1,423).²⁴ Other social service districts throughout New York State that provided information to The Children's Agenda have similarly high rejection rates.

Statewide data does not exist on the reasons for application denials, but some insight can be gleaned from New York City's experience. In New York City in 2023, 27,721 applications for assistance were denied. A strong majority (71%) of these applications were rejected for paperwork reasons, not because families were deemed programmatically ineligible.²⁵

More than \$638 million in child care funding from state and federal sources is directly tied to the federal eligibility guidelines, and New York regularly supplements that total with several hundred million dollars in Temporary Assistance for Needy Families (TANF) funds. These funds must abide by federal requirements that restrict use to certain types of eligible families. Among other requirements, this means New York must determine income eligibility on an individual application basis, and program participants must meet employment or education activity tests.

²² See <https://acf.gov/occ/faq/2024-ccdf-final-rule>

²³ See page 43 of New Mexico's approved 2025-27 state Child Care and Development Fund [plan](#)

²⁴ Obtained by The Children's Agenda from Suffolk County's Department of Social Services through a Freedom of Information Law request.

²⁵ Obtained by The Children's Agenda from New York City's Administration for Children's Services through a Freedom of Information Law request

However, New York has considerable discretion in how it operates the Child Care Assistance Program within those federally-established parameters and, in many instances, applies more stringent rules to the program than required by the federal government. In transitioning to universal child care, New York should take bold steps to ease access to this program by reducing paperwork burdens on both families and local social service districts.

For example, OCFS regulations state that a social service district determines that income eligibility “shall be based on the average monthly income for a period of not less than one month nor in excess of three months prior to application, adjusted for any changes in income known or expected to occur during the period of authorization.”²⁶

Practices vary by district, so this regulation allows counties to require families in their community to submit as many as three months of pay stubs and other forms of income to demonstrate eligibility for this program while others are only required to submit one month of pay stubs. A resident of Albany County must provide twelve weeks of paystubs when they apply for assistance, while a resident of Westchester County must only provide four weeks of paystubs. OCFS should limit all counties to require the minimum proof of income as is permitted by federal law²⁷

Another example is the OCFS requirement that “if income fluctuates significantly, the average monthly amount shall be computed based on income received during a period of not less than three nor more than six months.” New York City’s Administration for Children’s Services only requires four weeks of paystubs if pay is identical each pay period, but interprets “significantly” as “any,” and requires twelve weeks of current, consecutive pay stubs if gross income varies by any amount.²⁸ This burdens low-income households who are less likely to receive salaried pay and more likely to have variable income paycheck to paycheck. OCFS should revise this rule to provide a concrete definition of “significant fluctuation, and it should be flexible reflecting that the hours and income of many low-income wage workers vary considerably each week.

As management for the Child Care Assistance Program transitions from local social service districts to New York State, OCFS should embark on an effort to standardize and simplify all aspects of the application process. The state should also adopt measures championed by the legislature over the past several years, including decoupling hours of care from hours of work, repealing the minimum earnings requirement, extending certification periods for assistance to two years, and enacting presumptive eligibility throughout the state. Finally, OCFS should prepare to shift away from the market-rate related reimbursement rate model and adopt one based on the true cost of providing high quality

²⁶ See OCFS 404 [regulations](#), page 9

²⁷ Albany County’s requirements are available [online](#) while Westchester’s requirements were obtained by The Children’s Agenda by requesting an application packet from the county Department of Social Services.

²⁸ See ACS’s Child Care Assistance Program [Application](#), page 14 of 19.

child care. This would include, among other things, increased rates and other supports for children with disabilities. Children with developmental delays and disabilities are underserved by the Child Care Assistance Program today²⁹ and many cannot access the care they deserve.

All of these reforms would constitute steps toward the ultimate goal of universal child care.

Implementation Plan

The 2026-27 New York State Budget should take steps towards making universal child care a reality.

Specifically, the enacted state budget should include the following provisions:

- Enact the \$1.2 billion workforce compensation program detailed in Governor Hochul’s Child Care Availability Task Force’s Roadmap to Universal Child Care.
- Include a sufficient funding for the Child Care Assistance Program to ensure eligible families throughout the state can receive assistance.
 - New York City’s Administration for Children’s Services estimates that \$1.8 billion is needed to cover costs over the next year.
 - An analysis of enrollment and spending trends in districts outside New York City suggests that \$500 million is needed to enroll eligible applicants.
- Invest \$75 million to partner with several local social service districts to develop and implement the community eligibility concept outlined above.
- Invest \$75 million to cap child care costs at \$100 a week per child in three or four communities in New York State.

The community eligibility roll-out and the capped-fee project must start relatively small to allow the Office of Children and Family Services to work out the operational details of this approach. These two \$75 million projects would provide non-means tested child care to approximately 10,000 children in different communities in New York State. Policymakers should take care to ensure that these bridge programs are geographically distributed across the state to ensure that they can be successfully launched in urban, suburban, and rural areas, and in both upstate and downstate portions of the state. The Office of Children and Family Services should select communities for this initial rollout based on need (a high share of income eligible families), geography, and indicators of community capacity like a robust early childhood systems building effort and an engaged local social services office.

²⁹ See The Children’s Agenda’s 2025 [fact sheet](#) on child care for children with developmental delays and disabilities.

Once these programs are successfully established, they should expand as quickly as possible to ensure that all New Yorkers seeking child care can benefit from those programs.

Below is an example of how this proposal would scale up over six years. This timeframe is contingent on the state's ability to generate sufficient revenue to support the roll-out to universal child care and the child care system's capacity to scale up quality care to meet demand. Policymakers should strive to achieve universal care as quickly as possible, while ensuring that every family can access a nurturing care environment.

Year	Workforce Compensation Program	Child Care Assistance Program	Community Eligibility	Capped Fee
One	• Enact S5533 (Brisport) /A492-A (Hevesi)	• Expand Funding to Eliminate Wait Lists	• Establish \$75 bridge projects to roll out community eligibility to select communities	• Establish \$75 million bridge projects to roll out \$20-a-day model in select communities
Two		• Transition to state management of the program • Guarantee child care assistance to families making less than 250% of FPL	• Expand to half of those communities statewide who meet the 80% community eligibility threshold	• Commit \$250 million to expand to communities with a high share of families near eligible for CCAP
Three		• Guarantee child care assistance to families making less than 300% of FPL	• Expand to include all communities statewide that meet the 80% eligibility threshold	• Continue expanding in communities with a high share of families near eligible for CCAP
Four		• Guarantee child care assistance to families making less than 85% of SMI	• Expand to include all communities statewide that meet a 70% eligibility threshold	• Continue expanding in communities with a high share of families near eligible for CCAP

Five	• Sunset workforce compensation program	• Set reimbursement rates based on the true cost of high-quality care	• Set reimbursement rates based on the true cost of high-quality care	• Set reimbursement rates based on the true cost of high-quality care • Continue expanding in communities with a high share of families near eligible for CCAP
Six			• Lower community eligibility threshold until all children are covered by this program.	• Reduce out-of-pocket costs for families until they reach \$0

The goal of this roll-out is to eventually construct a system whereby every family in New York can access free child care up to 13 years old, much like how every free school meal was eventually covered through expansions in the school meals community eligibility process.

However, as noted above, New York State is obligated to spend more than \$221 million on the Child Care Assistance Program and follow federal guidelines when doing so. This spending is tied to \$638 million in Child Care and Development Fund grants received from the federal government. In total, New York must spend nearly \$860 million on federally-eligible child care assistance. Absent changes to federal statutes akin the changes made to the school meals program in 2010, New York will still need to verify eligibility, apply means-testing criteria, and otherwise administer the current Child Care Assistance Program in some form to maximize the use of federal funds.

As it transitions to a system of universal coverage, New York should strive to identify administrative processes that will allow it to use these federal funds without overly burdening families. For example, if a family in receipt of SNAP benefits is applying to recertify those benefits and the state's data systems show that the family is also receiving child care assistance through enrollment in an eligible community. The information collected to determine SNAP eligibility is quite similar to what is needed for Child Care Assistance Program eligibility. New York could make further reforms to align the paperwork

requirements between the two programs and request that families sign a pre-filled and vastly simpler Child Care Assistance Program application than they are currently subject to. Using administrative data systems and an aligned application process could allow the state to maximize federal resources without unduly burdening families receiving care.

New York could also begin educating federal lawmakers about its plan to achieve universal child care, and how that policy aligns with many of the goals of the federal Child Care and Development Block Grant. The goal of this effort would be to secure changes to federal child care statutes to allow states to negotiate waivers that relieve them of individualized eligibility determinations.

The Cost of Universal Child Care in New York State

The revenue needed to implement state-funded universal child care is substantial. Existing estimates range considerably and are based on several assumptions, including:

- Ages covered
- Uptake estimates (what percentage of families would choose to enroll)
- Provider reimbursement rates
- Expected parental contributions (if any)
- The extent to which other programs like Head Start, Universal Pre-K, and publicly funded afterschool programs reduce child care costs or needs

For example, a 2023 study conducted by P5 Fiscal Strategies for Raising New York³⁰ estimated that statewide, a fully universal system for all children birth-to-five years old would cost \$14.7 billion at current salary levels and \$20.3 billion if staff were paid a living wage. This model assumed an 80% uptake rate for all children birth-to-five and no family contributions. This uptake rate matches assumptions for Universal Pre-K enrollment in the state. Evidence from other countries suggests that uptake would be lower than 80%, particularly for young children.

An analysis of Census Bureau Household Pulse survey data by New Yorkers United for Child Care concluded that New York State families with children under five currently spend up to \$14 billion on child care.³¹ However, that estimate also includes child care spending on children over 5 if they reside in a household with children under 5. Using this methodology applied to all ages, families currently spend approximately \$17 billion on child care across New York State.³²

³⁰ See a 2023 [Memo](#) from Prenatal to Five Fiscal Strategies titled “Understanding the true cost of child care in New York State.”

³¹ See New Yorker’s United for Child Care’s 2024 [report](#) titled “UPC: A Five Year Roadmap for Universal Public Child Care”

³² This was calculated using data from a 2024 Census Bureau Household Pulse Survey [table](#). The total amount spent by respondents in New York State over the past 7 days was multiplied by 52 weeks.

Under this plan, most of those child care costs that families struggle to afford would, over time, be shifted to New York State's budget.

The Children's Agenda released a report earlier in 2025 which examined various revenue options for New York State to consider as it rolls out universal child care.³³

That report identified different criteria to help assess the various revenue options explored throughout the analysis.

- **Progressive:** As much as possible, funding for quality child care should come from those most able to afford it. If it is not explicitly progressive (e.g. millionaire tax or estate tax), it should not be regressive.
- **Sustainable Growth:** As child care is an ongoing need for working families, the funding mechanism should be stable over time. Revenue models that fluctuate annually, decline dramatically during economic downturns or will likely shrink in the future should be avoided.
- **Scale:** The ambition of this effort is to make quality child care universally available. Therefore, the funding model should be robust enough to meet that goal and may need to include several revenue streams.
- **Politically viable:** The political palatability of a child care funding mechanism is an important consideration. Any new revenue would need to be approved by both houses of the New York State Legislature and signed by the Governor. It would also likely need broad and sustained support among key stakeholders in the state.
- **Dedicated to Child Care:** Some revenue options can be more easily dedicated to child care, while others would increase state operating funds and the state's overall capacity to increase spending on child care. There are merits and shortcomings to each approach. For example, dedicated funding streams have a history in New York and elsewhere of being raided for other spending priorities. However, new revenues that are simply added to the general fund do not necessarily create a presumption of funding a particular area.

Governor Hochul's Coalition for Universal Child Care is tasked with developing a revenue plan for these needed expansions in child care funding. That coalition's work should adopt these principles and build a proposal for funding universal child care at the scale envisioned by this report.

Conclusion

The approach outlined in this report would make child care more available and accessible to every family who needs it. It would also deliver on the Governor and legislature's

³³ See the report on The Children's Agenda's [website](#).

commitment to making New York an affordable place to raise a family. The election of a new mayor in New York City and the attention paid to universal child care in the mayoral campaign add to the urgency of addressing this issue now and highlight the opportunity New York has to lead the nation in implementing a plan for truly universal child care. State and local leaders should seize this moment and adopt this bold plan to make New York a place where families can thrive.
